

Wedges

This is Tanner, Katie. It is May 2011. We're at Kearney Can we 'wedge' a minute?

Of course we are telling you about wedges. A wedge is an object with at least one slanting side ending in a point. For example a blade of a knife, the tip of a shovel , an ax , spoons, forks, and who would guess TEETH!! Wedges are very helpful because they can do so many things like stop a door or chew food.

There are so many things in this world that are wedges. The next time you have nothing to do look around at all of the wedges you have. Thanks for giving us a minute or less.
